Normal check boxes.

Field group with check boxes.

This group works like a radio button but only radio buttons get a round border if the check box character is set to ccCircle. No problem, set the border width to zero and draw the circle in background if needed.

This is a radio button. Since Acrobat 7 it is no longer possible to deselect the active check box, except with a reset form or Javascript action.

The RadioIsUnion flag has only an effect if at least two check boxes use the same export value.
