*This example shows how a multi-language document can be created.*

*The language is initially selected with a JavaScript function when opening the file.*

*Additionally, the whished language can be selected with two bookmarks. The bookmarks simply hide or unhide a layer.*

*The page contents must of course be created twice, one time in English and one time in German in this example, but in different layers.*

*The bookmarks switch the layer state from on to off or vice versa with a SetOCGStateAction. The layers which are included in the Toggle array will be set to on or off, depending on the current state.*
