

The following pages were imported from different PDF files. DynaPDF adjusts the destinations of link annotations and bookmarks so that all destinations refer to the new page numbers after import.

Entire PDF files can be easily merged with `ImportPDFFile()` but it is also possible to import only specific pages of an arbitrary number of PDF files. You can also add further pages or edit imported pages if necessary. An existing page can be opened for editing with `EditPage()`.

Bookmark destination type dtFit

Bookmark destination type dtXY\_Zoom  
Zoom factor 3, Top position 50 (TopDown coordinates)

Bookmark destination type dtXY\_Zoom  
Zoom factor 0.5, Top position 50 (TopDown coordinates)

Bookmark destination type dtXY\_Zoom

Zoom factor not defined (unchanged), Top position 50 (TopDown coordinates)

Bookmark destination type dtFitH\_Top  
Top position 50 (TopDown coordinates)

Bookmark destination type dtFitH\_Top  
Top position 200 (TopDown coordinates)

Bookmark destination type dtFitV\_Left  
Left position 200. FitV has no effect if the width of the page  
is not greater as the height.

Bookmark destination type dtFit\_Rect

We zoom  
into the  
rectangle

Destination type dtFit. This variant scales the page so that both sides fit into the viewer window.

The six text fields share the same value. Such an array of fields is called a field group. All fields in the group must be of the same type.

A field group can be created in two different ways: either create two or more fields with the same name or pass the handle of the base field as Parent to the children. The latter way is more efficient since it is not required to search for the parent field when a child will be created.

Enter some more text into a field to see the difference between auto size and fixed font size.

Font size  $\leq 1.0$  means auto size.

The same fields with a fixed font size.
