This example shows how a multi-language document can be created.

The language is initially selected with a JavaScript function when opening the file.

Additionally, the whished language can be selected with two bookmarks. The bookmarks simply hide or unhide a layer.

The page contents must of course be created twice, one time in English and one time in German in this example, but in different layers.

The bookmarks switch the layer state from on to off or vice versa with a SetOCGStateAction. The layers which are included in the Toggle array will be set to on or off, depending on the current state.
